

## Cleaner has a space-age claim to fame

INDUSTRIAL powered, Nilfisk's newest vacuum cleaner has a reputation that stretches beyond suburbia.

From NASA's Kennedy Space Centre, Nilfisk played its part in the May 12 launch of the space shuttle *Atlantis* as it prepared for its final mission into space.

Equipped with supercharged filtration systems, the Nilfisk Extreme was used to clean the shuttle's cargo bay, purifying the air by clearing it of fine particulate matter.

The HEPA filtration system is said to trap 99.995% of all dust particles.

For more information on the Nilfisk Extreme X300, RRP \$749, visit [www.nilfisk-advance.com.au](http://www.nilfisk-advance.com.au) or call (02) 8748 5900.
